The Primary Sector. Current and Future

In the near 2050, more than 9700 million of humans will populate the Earth. It is estimated that the demand for food will increase by 70% for that year and that at least 80 billion dollars of annual investment will be necessary to respond to said demand.

That means that all the production processes have to be not only much more efficient, but also the rest of the points of the distribution chain must be tuned as the most precise clock in the world.

Nothing can be wasted and therefore we have to take advantage of every last gram of food produced. What most makes us think is that today, we do not know if we will be able to produce such amount of food.

Surely we can only respond to that demand if we adopt more technological and efficient means of production. We must also change the relationship between the producer and the consumer avoiding that (according to UN estimates) 50% of the value of the product remains in the distribution network and not in the hands of the producer.

According to estimates, food demand will increase by 70% by 2050, and at least \$ 80 billion annually in investments will be needed to meet this demand, most of which is expected to come from the private sector.

The AgrolifeCoin Market.

Government policies often prove to be ineffective and may, in fact, create impediments to offer financial

The direct market of **AgrolifeCoin** are all people and company that wish to invest in products with a great potential for growth, in particular those that are related to the primary sector from any of its aspects.

The **AgrolifeCoin** system grows thanks to the efforts of multiple stakeholders in our cryptocurrency and in our project. So far it has been funded by a group of co-founders and the **AgrolifeCoin** team.

It aims to be the alternative to financial institutions in developing countries to improve credit capacities in the agricultural sector.

It should not ignore the fact that the primary sector environment is generated an important parallel economic activity, which has to do with other sectors such as transport, technical, economic and legal advice, biotechnology or creation of means of production.

If the agricultural sector is of great importance in developed countries, in those that are still developing, this importance is even greater. In these environments, agriculture is the true axis that supports the subsistence of the population (in 2005 it occupied between 18 and 22% of the active population and today almost 40%), reduces poverty, creates jobs and resources energetics to self-supply the activity.

The majority of farmers in these countries also lack consolidated financial systems and that can able to support large agricultural extension projects. The most important source of funding comes from corporate initiatives and is often limited and ineffective.

All this makes them perfect scenarios to apply the project and its **AgrolifeCoin** currency.

Currently, intense work sessions are being held with groups in countries in Europe, Africa and Latin America to promote the project.

The AgrolifeCoin Market.

Agriculture is the world leader in Employment

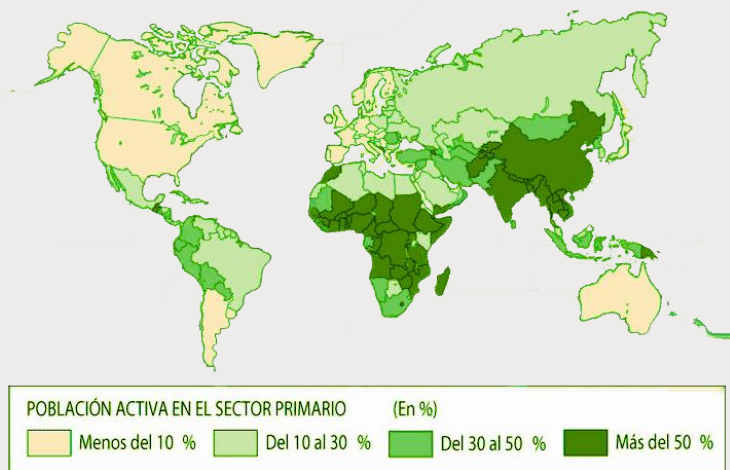

Active World Population by Sector

40% of the income of the world population comes from the Agriculture sector.

500 million small farmers provide 80% of the food consumed in developed countries.

Agrarian Activities in the World

Agriculture, a leader in job creation. The primary sector is the one that has better resisted the crisis, with an increase of employed from the levels of 2008. But, in addition, agriculture, livestock and fisheries have the most favorable balance of the Active Population Survey.

The Agrolifecoin Mission.

AgrolifeCoin is a Cryptocurrency with a huge mission: To turn global agriculture into the most profitable investment in history.

AgrolifeCoin comes to innovative ecosystem of criptomonedas focused and based on the primary sector, mainly agriculture.

AgrolifeCoin will invest in this type of companies as part of its mission to catalyze the economic growth of the activity. Its commitment is to increase the amount of capital available for development and improvements in this global sector.

The need to invest in agriculture is not only due to the growth of the world's population, but also to the change of the food preferences of the middle class in emerging markets towards foods of higher quality and value.

AgrolifeCoin is an alternative form of payment to the current media in the value chain of the products generated by this economic activity.

It will bring producers and consumers, giving support to online markets in which the use of this cryptocurrency will facilitate a more just relationship between both.

There is a clear imbalance between the portfolio of loans from the banking sector to agriculture and its contribution to GDP.

This limits investment in agriculture by farmers and agricultural enterprises.

It also shows that the loan barrier is not due to a lack of liquidity in the banking sector, but rather a lack of willingness to extend loans to agriculture.

AgrolifeCoin seeks to mitigate the effects of this imbalance.

The AgrolifeCoin Mission.

AgrolifeCoin wants to take to any corner of the world the possibility that people can access a platform of products and services in a practical and efficient way.

AgrolifeCoin mission is to help all people worldwide to use a fast, economic and safe payment system.

It will help in the development of the villages, providing great benefits to producers and consumers of agricultural products. It will reduce significantly the commissions that are paid for the purchase of said products.

It will provide the sector with all the benefits related to its support technology: Blockchain. It will promote the use of this technology in the traceability from the producer to the consumer of these products, also allowing their payment in a reliable way for both.

The key objective is to create a global, transparent, efficient and safe ecosystem that allows agricultural and food companies to significantly reduce expenses related to production, sales and logistics of the food we consume today.

It will establish a more just and direct relationship between producers and consumers, offering everyone access to a wider and more varied range of products.

The objective is to make **AgrolifeCoin** be used as an alternative means of payment for international commercial transactions.

AgrolifeCoin has come to stay. Our mission is to be the first cryptocurrency for the purchase of Agricultural Products and Tools.

We strive to offer value to investors while providing opportunities for growth and enrichment to our users and our business partners, always striving for honesty, justice and integrity.

Scope of Application.

AgrolifeCoin provides several approaches for its use and application:

Capital and financial asset.

It can be used as a saving and investment instrument.

Digital platform.

It is the asset that supports the economic activity of the **AgrolifeCoin** social network; on the other hand, the network itself contributes to the rise in the value of the currency.

Exchange medium.

It will be redeemable for FIAT money or other cryptocurrencies through digital exchange houses.

Customized payment system.

It can be used for the purchase of goods and services worldwide.

Marketing Solutions.

It will significantly improve the channels and marketing processes of the products, reducing the intermediaries in the value chain, increasing profits in a very significant way.

A farmer has different tools: hoes, harvesters, tractors.

AgrolifeCoin It is also a tool to facilitate and make more profitable your work.

Characteristics of AgrolifeCoin

The most outstanding characteristics of **AgrolifeCoin** are:

- 🍅 **Decentralized:** It is not under the control of any public or private entity, understand these as Companies or States. The legislations are local but the scope of the currency is worldwide hence the impossibility of being controlled. In the case of some cryptocurrencies it is the network itself through mining that is in charge of generating new currencies according to demand, whereas in the case of **AgrolifeCoin** the currencies are pre-mined, and this has a clear deflationist effect.
- 🍅 **Private:** **AgrolifeCoin** allows you to conduct transactions without the knowledge or approval of trusted third parties.
- 🍅 **Direct:** No intermediaries. Transactions are made directly from person to person, this operation and the practical absence of intermediation make transactions instantaneous and with minimal cost (almost nonexistent)
- 🍅 **Anonymous:** The AgrolifeCoin Ecosystem is totally anonymous. It is not necessary to reveal your identity when doing business and this is one of the main characteristics of our currency.
- 🍅 **Safe:** The money belongs to you 100%. It can not be intervened by anyone and the accounts can not be frozen or seized.
- 🍅 **Economic:** The cost per transaction with **AgrolifeCoin** is lower than that of any bank worldwide.
- 🍅 **Fast:** Fast: The fact that the coin is pre-mined makes that transactions with **AgrolifeCoin** system are almost instantaneous.

Security

The transactions are guaranteed by the underlying technology: the Blockchain. When the transaction is made to a recipient, we have absolute certainty that this will be the case and not another one who receives our payment. On this point we must say that different systems of trust have been tested that guarantee the agreement between the parties, in case of having to correct some transaction error in the transactions.

AgrolifeCoin is not subject to the intermediation of third parties, it is based on point-to-point transactions between the one who transfers the money and the one who receives it.

Use a string of classic blockchain in which the transactions are public but SHA256 encryption is used to secure them.

It is impossible to falsify or duplicate the use of advanced cryptography techniques that prevent such a fact.

The network on which it is supported and the wallets have important security measures, such as verifications in two phases or encryption by key pairs. All this guarantees that AgrolifeCoin coins are used legitimately.

The download wallets and the Web have been audited by computer security companies to ensure a high level of security against hacker attacks or malicious uses.

Security is one of our main concerns when designing and deploying any of our solutions. Our prestige as a company goes in it.

Privacy

The technology of **AgrolifeCoin** allows you to send transactions completely anonymously.

In currencies based on the SHA256 Algorithm, you can know which coins are spent and which are not, this is known as UTXO.

Through the **AgrolifeCoin** wallet there is an optimal level of anonymity, making the work of tracking transactions complex.

In the current banking model, the level of privacy granted to its users is limited, since access to the information of the parties involved will always be audited by a trusted third party.

The need to keep track of transactions in our systems is not incompatible with the need to preserve the anonymity of the parties involved. This is the privacy model promoted by Blockchain: the transactions are audited without being able to identify the people who carry them out.

AgrolifeCoin does not keep any data on its servers that allows it to identify the people who carry out the transactions. It does not keep any personal data on which explicit consent has not been given for its use as required by the LOPD.

Thecnology of Agrolife Coin.

Technical Data

WAVES PLATFORM

Token Name	AgroLifeCoin
Token Symbol	AGLC
Token Price	1 AGLC = 0.05 EUR
Token Platform	Waves
Total Supply	250,000,000 AGLC
Sale Starting Date	30 April,2019
Sale Ending Date	31 August,2019

Token Distribution

250 million pre-mined Tokens have been issued and will be used for the following purposes:

100 million distributed in 1 million Tokens for each of the 100 co-founders who have financed the project.

The first 5000 users registered in the social network received 1000 Tokens.

The first 5000 registered who buy at least 1000 Tokens in Waves DEX will receive 1000 Tokens.

The first 1000 people who purchase the PRO subscription in the social network will give away 10000 Tokens.

The rest is maintained by the company to cover and give coins in the credit swap. of the social network.

- Co-Founders
- 1st 5000 Users
- 1st 5000 Users Who buy 1000 ALC
- 1st 1000 Pro subscribers
- Company Reserved

Funds Allocation

Here is the detail how the Agrolifecoin's funds will be allocated

Thecnology of AgrolifeCoin.

Wallets

AgrolifeCoin wallets are available in the following operating systems and repositories:

Windows

MacOs

Linux

OnLine

Git

What is a wallet?

A purse or wallet is a software to store, save, receive and send your cryptocurrencies in an encrypted and therefore secure way.

The wallets can be compatible with a single cryptocurrency, such as official portfolios, or on the other hand, multi-crypto portfolios, commonly created by third parties. The portfolio also acts as a ledger for your transactions.

How does a wallet work?

We started by contradicting a bit the purse definition, since cryptocurrencies or tokens are stored in your private key and not in your wallet. The private key is a 100% sure code that you can only know, and a public key, a public code that is responsible for indicating the amount of cryptocurrencies or tokens that your private key or wallet has.

The security of the portfolios is developed on a public / private key pair.

The ownership of your private key gives you full control over your cryptocurrencies

associated with their corresponding public keys, so it is extremely important that only you know your private keys. We suggest using portfolios in the cloud for people with less experience, such as the one that **AgrolifeCoin** provides.

IMPORTANT: It is convenient to download the wallets from the official pages and distrust those that promise profits not reflected in the "White Papers" of the projects that endorse them. Never share your password and even less your private key. Store them in a safe place.

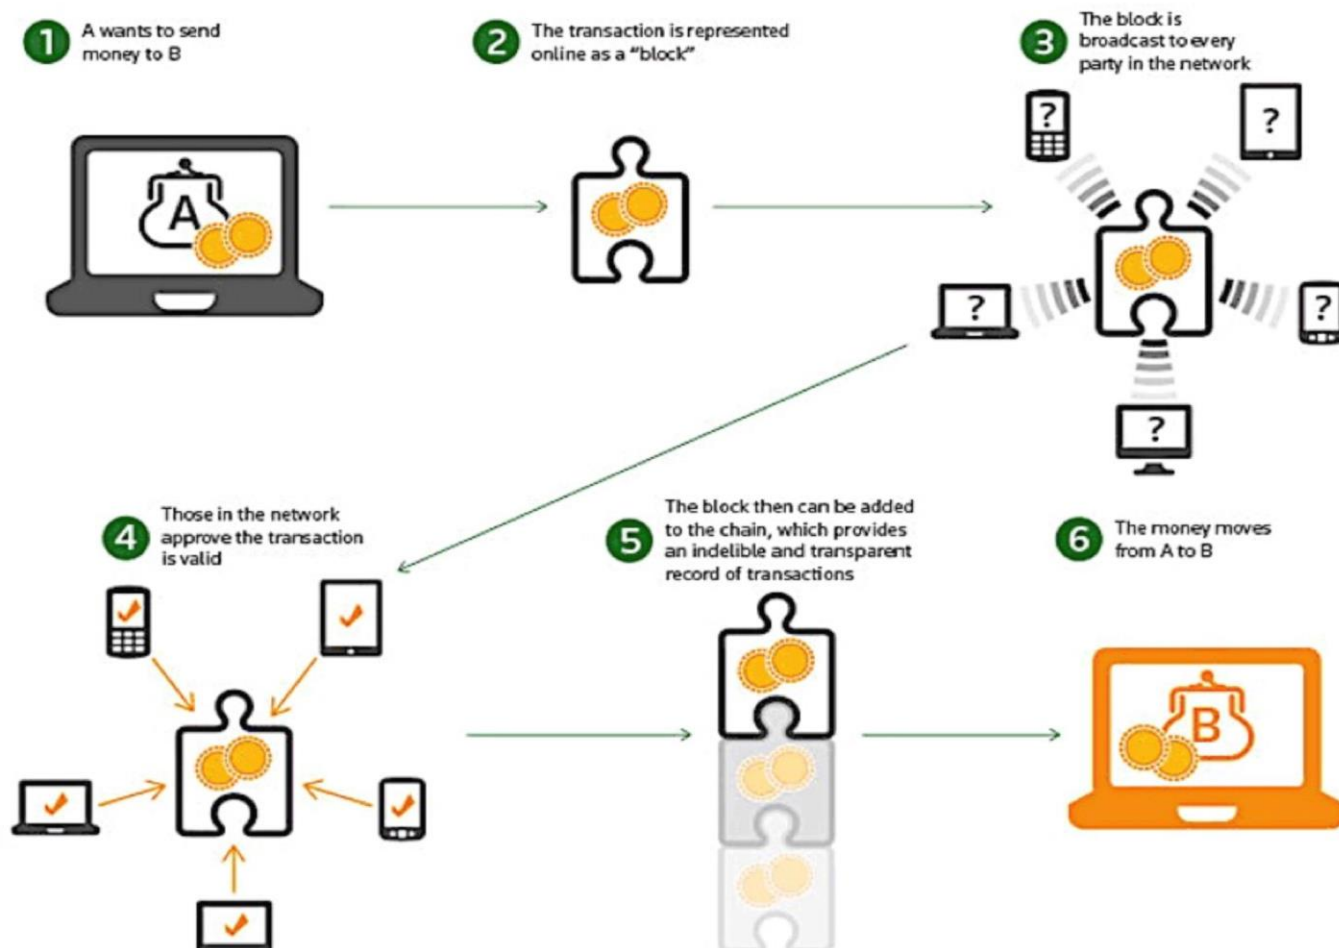

AgrolifeCoin and the Blockchain Ecosystem

The literal translation is "chain of blocks". They can be one or several interconnected or not. Broadly speaking, it is a large database ordered distributed among several participants, called nodes, which contains all the operations carried out by each of them.

This solution acquires value in transactions that require security and transparency without the need of intermediaries.

Simplifying, we could say that Blockchain is a cryptographically distributed and secure network for storing information.

AgrolifeCoin is a peer-to-peer Internet currency that allows instant payments, almost at zero cost for anyone in the world. AgrolifeCoin is an open source, the global payment network that is totally decentralized from the central institutions. Mathematical algorithms secure the network and allow people to control their own finances.

AgrolifeCoin and the Blockchain Ecosystem

In the system, two types of participants are distinguished:

- ✓ Those who send or receive transactions: People who have **AgrolifeCoin** and use it to buy and pay for something.
- ✓ Processing and validation of generated transactions: Computer equipments are responsible for resolving and validating operations. There is a network of computers designed to guarantee the integrity of the data of each transaction. Once the data has been validated, transactions are included in a block of the chain.
- ✓ All the processing done by the computers to validate the transactions implies an important use of energy. This cost is paid by those who transact and has the name of fee. In the case of **AgrolifeCoin** this fee is insignificant. It is important to note that what is paid is not related to the amount sent. That is, if we send 100 USD or 100,000 USD with a fee of 5 USD, the chances of both being validated and included in a block as fast as possible are equal.

✓ Although these fees are lower than what one pays to move money through the banking system, we must pay them every time we want to make a transaction with **AgrolifeCoin**. It should be noted that the currency is pre-mined and this makes these fees very low.

AgrolifeCoin uses the Blockchain to create an electronic money system peer-to-peer. Allows the sending of payments between both parties directly, without the need for banks or financial institutions.

Benefits of AgrolifeCoin.

- ✓ **Without Bank account:** Without the need of bank accounts you can make your transactions to pay for the products you
- ✓ **Low cost per transfer:** Your transfers will have a cost per transaction much cheaper than any banking agency
- ✓ **Payments from mobile devices:** You can use your mobile to make payments in a comfortable and safe way.
- ✓ **Fast transaction:** The blockchain system makes operations much faster and safer.
- ✓ **Opportunity:** With **AgrolifeCoin** you can participate in bonuses, affiliate program, staking, generating in this way active and passive income to the users of the currency.
- ✓ **Multiplatform wallet:** for mobile and desktop.
- ✓ **The social network** will make alliances with companies that generate safe and reliable payment tools through our cryptocurrency.
- ✓ **Recieve and Send AgrolifeCoin** with QR code.
- ✓ All Affiliates will have their payment gateway, e-commerce, wallets and cashiers for Currency Exchange.

Waves Network Structure

The structure of the peer-to-peer network impacts the security and performance of crypto currencies. A geographically clustered network can quickly propagate a new block to many other nodes. This makes it more difficult for a malicious miner to propagate conflicting blocks/transactions quicker than honest nodes. However, a less clustered network may mean that full nodes are being run by a wider variety of users which is also good for decentralization.

Waves has a peer-to-peer network for disseminating block and transaction information. Any computer running blockchain software is considered a node of that blockchain.

Waves also contain full nodes allowing anyone to take part in the decentralized process of block creation.

The Waves full node serves two critical roles:

1. To relay blocks and transactions to miners
2. To answer queries for end users about the state of the blockchain.

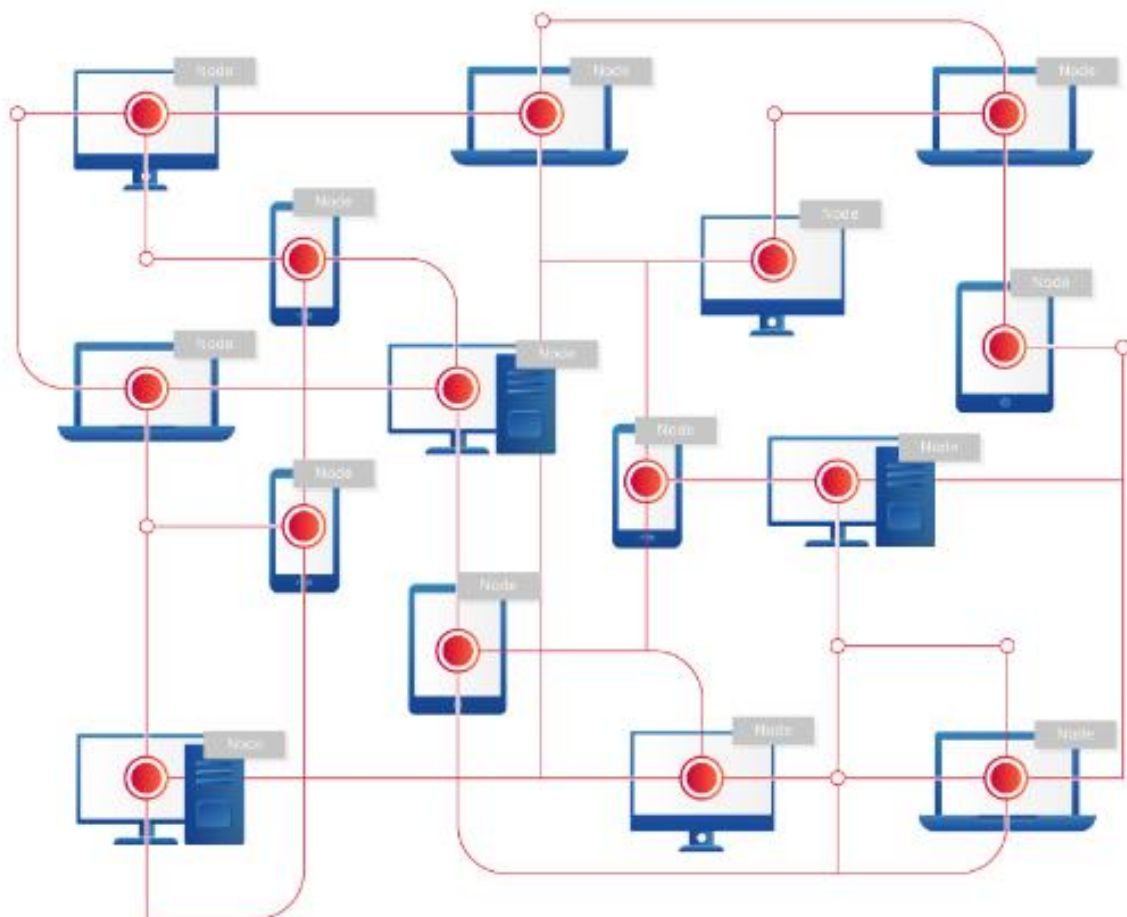

The Importance of a Full Node

The job of a full node is to store the blockchain data, pass along the data to other nodes, and ensure newly added blocks are valid. Validation entails ensuring that the format of the block is correct, all hashes in the new block were computed correctly, the new block contains the hash of the previous block, and each transaction in the block is valid and signed by the appropriate parties.

Waves also contain full nodes allowing anyone to take part in the decentralized process of block creation.

Full nodes may also act as mining nodes (i.e., generating new blocks). The mining node checks that each transaction is self-valid since the other nodes would reject the block if it included invalid transactions.

Any node may propose new transactions, and these proposed transactions are propagated between nodes until they are eventually added to a block.

Why invest in AgrolifeCoin?

AgrolifeCoin is the first digital system that has its own social network and integrated payment platform, which will incorporate smart projects in its Blockchain.

By having the backing of legally constituted companies, our cryptocurrency will generate confidence in future investors, hoping that they see in it an intelligent investment.

AgrolifeCoin will allow to pay products, goods and services through electronic commerce or make donations to solidarity projects instantly and privately.

AgrolifeCoin will be an essential element in new projects that will be born with the support of the currency and the team that supports it. These projects in themselves may have more scope than the currency itself.

AgrolifeCoin is a cryptocurrency, which can be sent anywhere in the world anonymously and safely and can be exchanged for any other currency.

AgrolifeCoin protects against the loss of value of FIAT money and the monetary policies that tend to devalue these currencies to improve, for example, the export capacity.

Why invest in Agrolife Coin?

Experience shows us that investors in digital currencies have benefited immensely from the increase in prices over time. Therefore, investing in cryptographic assets offers the opportunity to increase your financial assets over time.

There are crucial factors to consider when investing and we want you to know that

AgrolifeCoin meets them.

Acceptability. It is very important when investing in a cryptographic asset, knowing where you can change the currency or where you can use it to purchase goods, services or products. **AgrolifeCoin** fulfills this premise.

Portability. A digital currency must be portable. They should be able to be easily carried from one place to another without much challenge. With **AgrolifeCoin**, thanks to their wallets download, you can transport your coins in a pendrive, always having them safe.

Security. It must also be safe. This is a characteristic of all legal currencies. From the US dollar to the pound sterling, safety is a common quality. So, a good digital currency must also be secure and **AgrolifeCoin** has all the necessary cryptographic systems to make it completely secure.

"The pioneer is the one who gets the Great Benefits"

How to invest in AgrolifeCoin

We are going to give you some simple tips on how to start investing in **AgrolifeCoin** in the long or short term depending of your investor profile.

Follow the steps below to:

To invest in the long term.

The first step is to decide how much you would like to invest in **AgrolifeCoin**. Everything requires planning and setting objectives.

You can buy a small amount to test how the currency works and reserve the amount you wish to invest. Finally, you can follow a single investment strategy or do it periodically, either weekly or monthly.

Remember that it is always money you do not need for your daily expenses, because any investment should be out of the budget to live.

The second step is to enter the official website <https://www.agrolifecoin.org> and register to use a wallet.

You will need a wallet address to request and receive the **AgrolifeCoin** that you will buy for your long-term investment.

To invest in short or medium term.

For short term investment act in the same way as in long investment.

Plan the amount of your investment and the time periods in which you want to do it. Second, join one of the exchanges where **AgrolifeCoin** has presence and register. From that moment you can change other crypto currencies by **AgrolifeCoin**.

To inform you about the operation of **Waves DEX** we leave you this video tutorial

Buy and sell AGLC in Waves DEX: https://www.youtube.com/watch?v=YPhsGcMq_pU

Advantages compared to other Cryptocurrencies.

What are the benefits of AgrolifeCoin over other AltCoins?

Our team works every day and continuously to achieve the objective of mitigating risk through the solidification of the project and the development of multiple market platforms.

In addition to having the support of companies with experience in a solid and real project such as ours.

It is not just an idea, it is not a future project, it is a present fact that is already available for its use.

The great Opportunity of our AgrolifeCoin currency is its long-term projection, offering all available resources to investors, who will be the great muscle to achieve our goal.

AgrolifeCoin is a system based on the Blockchain, the same technology that uses Bitcoin but unlike this one with a series of advantages. Among its features we can highlight:

Unlike other cryptocurrencies, AgrolifeCoin has the backing of affiliated trade and associated with the Agrolife Social Network, generating confidence and transforming commerce into the next evolution of "The Collaborative Economy".

It allows converting any product into a digital value of the block chain of this cryptocurrency.

Handles very small commission rates, almost at zero cost.

It allows massive access to the platform because it works directly with your payment system, without relying on third parties.

It handles small and large scale, because our currency allows small payments without problem.

It has an algorithm that focuses on providing a form of distributed and effective marketing to reach everyone.

The Agrolife Social Network.

Agrolife is a social network of Agriculture, Livestock, Forestry and Fisheries, where everyone can have their space to market their products, whether companies or individuals. It offers all the benefits of electronic commerce through online stores regardless of what the volume or type of product you offer.

It is the first Social Network with an online sales platform for agricultural products and the primary sector that adopts the **AgrolifeCoin** cryptocurrency as payment method. The development team of **AgrolifeCoin** is working on this project to emerge in 2018.

The Social Network will make alliances with companies generating secure and reliable payment tools through our cryptocurrency.

Unlike other cryptocurrencies, **AgrolifeCoin** has the backing of affiliated and associated commerce, generating confidence and transforming commerce into the next evolution of the Collaborative Economy.

All affiliates will have their payment gateway, e-commerce and digital wallets, leading to a quantitative leap in commercial activity.

The Agrolife Social Network.

- 🍅 Farmers at any scale, breeders, fishermen, foresters and any person who devotes himself professionally or vocationally to any of the activities of the Primary Sector. More and more people have as a hobby or livelihood some type of small-scale agriculture, such as ecological or urban.

- 🍅 Consumers and users who are interested in the products of this sector. Every day more people are worried about their diet and they are much more informed about the origin and characteristics of the products they consume.

- 🍅 Companies or professionals who wish to offer their products and services through any of our campaigns. In the Social Network you will find in a single place the market niche that your activity requires, facilitating its expansion and growth. Our Social Network is a powerful sectoral promotion tool.

- 🍅 People who want to use our cryptocurrency as a means of payment or investment.

The Agrolife Social Network: Services

Free Services

They are all those services that all our users can enjoy for free.

Service	Description	Unlimited
Photo album	Create and publish albums and photos.	✓
Affiliate program Credits	Earnings for promoting the network.	
Videos	Earn credits by activity and convert them into AgrolifeCoin (AGLC). Publish videos.

Social network. Benefits of Affiliates

All users earn credits for their daily activities, which can then be exchanged for **AgrolifeCoin** cryptocurrencies.

Thus the social network becomes an additional source of revenue for users within it.

AgrolifeCoin has thought of all the users so that they can earn money even for free, for example by publishing agricultural books and selling them or simply as a member that promotes the social network.

The more people who are part of the Social Network, the more possibilities of profit there will be for everyone.

AgrolifeCoin creates a referral system that allows users to obtain additional income for purchases and activities carried out. This stimulates the growth of the network since it invites to join the community, generating commissions up to the fifth generation.

Disclaimer: **AgrolifeCoin** is a social network that has an affiliate program, it is not a multi-level business. Only try to support the collaborative economy being an element of added value to encourage the interest of the collaborating members of the social network.

Social network. Benefits of Affiliates

Free Users: The social network **AgrolifeCoin** is a free platform for all users who join it and everyone will be entitled to the affiliate program and enjoy many benefits, among the most outstanding, the usual ones for the activity in the own Social Network **AgrolifeCoin** are:

Concepts	Level 1	Level 2	Level 3	Level 4	Level 5

Creation of a decentralized application for mobile phones with chat, wallets and stores included.

January 2020

7

8

Purchase of farms for organic farming and start-up Aquaponics.

March 2020

9

Conclusions

Agriculture seeks innovation to improve the way to address problems, and in the near future **AgrolifeCoin** will be identified as the cryptocurrency of the Agricultural sector that came to give solutions to very real demands of it.

It aims to establish a fairer and more equitable relationship between those who produce and those who consume, reducing intermediation costs and reducing the value chain.

It will contribute to the sustainability of the Agricultural Sector by facilitating its economic viability through the general reduction of costs.

Indirectly, it will improve the environmental quality linked to agricultural and livestock activity. It will stimulate the use of renewable energies and promote the creation of employment in those places where it is most necessary: emerging countries.

It will create a financial fabric that will make possible the start-up of new projects in those places where it does not exist.

It will help to avoid the abuses of the monetary policies that promote unexpected devaluations with the consequent general impoverishment of the most disadvantaged.

In itself it can be understood as a means of investment since its growth will be driven and encouraged by that of the other cryptocurrencies. It is enough to see the revaluation of other altcoins to understand the investment opportunity and growth of this emerging currency.

AgrolifeCoin was born as a project full of strength and enthusiasm, which counts among its ranks a group of capable, young and visionary people. It has an undeniable potential for growth.

Legal Note.

This document "White Paper" contains the terms, restrictions and conditions that govern the use of the **AgrolifeCoin** system.

AgrolifeCoin, is a cryptocurrency based on the analysis of mathematical operations, in addition to being an Internet application "Protocol" that allows the exchange of value in the form of cryptocurrency.
